MICRONEEDLING RF IN 2019 – WHAT HAVE WE LEARNED

Michael H. Gold⁽¹⁾

Gold Skin Care Center / Tennessee Clinical Research Center, Dermatology / Research, Nashville⁽¹⁾

Microneedling with RF needles has become a very popular modality for treating wrinkles, photodamaged skin, and atrophic acne or traumatic scars. Many of the EBD companies have developed microneedling RF devices that use either insulated or non-insulated needles and use fractional or stamp delivery of the needles into the skin. The different devices that are available now will be reviewed with the evidence-based medicine to support their effectiveness and their safety. This class of device for cosmetic practices has become very important and from this presentation, how they work, why they work, and how well they work will be reviewed.

Disclosures – EndyMed, Invasix
