INTRODUCTION: The main function of plasma is to nourish, revitalize, maintain and balance the skin cells, but this together with the extract of bocoa and topical hyaluronic acid keeps the skin compact and hydrated.

OBJECTIVE: Demonstrate the efficacy of the use of plasma in combination with the extract of bocoa and topical hyaluronic acid as maintenance in patients with previous application of injectable hyaluronic acid.

MATERIALS AND METHODS: In the database a sample of 30 patients who had made face filling with hyaluronic acid at 0.20% was taken, but only for the study were those who had four months after its application, thus being a total of twenty two patients. performed one session per month for eight months and together the topical application of nocturnal hyaluronic acid serum and bocoa extract.

RESULTS: The twenty two patients noticed that their skin remained in good condition and that the effect of the filling that had been made persisted in their face.

CONCLUSIONS: Make a facial filling is not enough to keep the skin is compact is important to give a plus and the right choice for being an autologo product is the plasma in conjunction with the extract of bocoa and hyaluronic acid in a topical way that helps maintain a desired aspect of the skin.
